

Experiential Sessions in Collective Intelligence FACILITATION

*"Knowledge is acquired through experience, everything else is just information."
Albert Einstein*

Living the experience, first feeling what effect it has on us and on the group, then understanding what we have experienced through theoretical input, this is what we propose to **anchor the experience, while meeting your operational objectives.**

Your needs:

- **Design and facilitate** one or more events, seminars or workshops,
- Discover, **experiment and disseminate collective intelligence practices** (e. g. Theory U) and collaborative approaches within your organisation,
- **Bring out the initial outcomes** of a project or team in a short time.

Our offer:

EXPERIENCE WORKSHOP

1. During a **2-hour session, based on your motivation** for this event, we **co-design** together its content and structure.
2. The event itself, lasting **from between a half and two days**, encourages the mobilisation of collective intelligence and the emergence of creative solutions based on collaborative approaches (co-

development, Open Space Technology,...).

Running throughout our work will be **Theory U**, making it possible to **access the emerging future** through the **quality of intention, attention and listening.**

COLLECTIVE INTELLIGENCE PATH

1. During a **3-hour session, based on your motivation** for these **3 events (or more)**, we co-design together their sequencing.
2. Each workshop, lasting **from between a half and two days**, will encourage the mobilisation of collective intelligence and the emergence of creative solutions based on collaborative approaches (co-

development, Open Space Technology...).

Running throughout our work will be **Theory U**, making it possible to **access the emerging future** through the **quality of intention, attention and listening.**

3. At the end of the process, a systemic synthesis makes it possible to **capitalise on the experience** and define the **resulting perspectives.**
